DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-63 are rejected under 35 U.S.C. 102(e) as being anticipated by Lebel et al (US 2002/0019606). Lebel discloses a microprocessor controlled ambulatory medical apparatus comprising a sensor that provides an output signal as a function of a concentration of an analyte, a communication circuit coupled to the monitoring device, wherein the processor is adapted to calculate an amount of fluid infused into the patient's body, and transmit a set of data indicative of the amount of fluid, an infusion device comprising a processor, a drive mechanism, and a circuit, the monitoring device comprising a transmitter and the infusion device comprising a receiver (Page 2, Paragraph 0019).

3. The device is a blood glucose test strip monitor and the infusion device is an insulin pump (Page 2, paragraph 0021). The monitoring device comprises an indicator that notifies of an event occurring or not occurring (Paragraph 0069). The indicator includes feedback to the

user regarding completion of an event and allows for inputting a command, and provides a display including the amount of fluid remaining (Paragraph 0132). The monitoring device can determine a first amount of time and transmit data if the amount of time does not exceed a predetermined time (paragraph 0020). The monitoring device has a memory adapted to store a plurality of fluid infusion parameters and retrieve one in response to a command (paragraph 0076). The memory is capable of storing identification values for the device and the patient (Paragraph 0142).
